

Autosafe

Introducing the Autosafe S-Series

Typically most opportunistic theft occurs when valuables are left in full view of the thief. However, the opportunistic thief today has become more sophisticated in their attack and will now break into a vehicle with only the smallest sign of valuables within, for example a satellite navigation or PDA cradle. Its not always convenient to find suitable places where you can store your valuables when on the move, you may need them quickly but you don't want to lose them in a random attack on your vehicle. All Autosafe products are designed with thought toward practicality and engineered using a combination of high quality materials including Steel, Aluminium and rubber. It comes complete with Autosafes patented highgrade steel twisted rope system that tethers the unit to a suitable fixing within the vehicle and the patented locking mechanism. Suitable fixing points to tether the satellite to include; chassis mounted seat fixings (base of passenger seat); seat hinges, ISO baby seat fixing points, body aperture and Luggage loops.
